2. Superseded/Cancellation. CJCS Notice 3150.23, "SUPPLEMENTAL INFORMATION TO CJCSM 3150.23C," 19 April 2013, is hereby canceled.

3. Summary of Changes

   a. Modified the guidance paragraph. Directs sustainment supporting data be in JOPES compatible format for CIN development and JPEC use.

   b. Changed Joint Capability Area to core logistics functions with updated definitions.

   d. Updated references.

4. When the prescribed action has been taken, this transmittal should be filed behind the basic document.
5. **Releasability.** UNRESTRICTED. This directive is approved for public release; distribution is unlimited on NIPRNET. Department of Defense components (to include the Combatant Commands), other Federal Agencies, and the public may obtain copies of this directive through the Internet from the CJCS Directives Electronic Library at www.dtic.mil/cjcs_directives. JS activities may also obtain access via the SIPR directives Electronic Library Web sites.

For the Chairman of the Joint Chiefs of Staff:

Fredrick S. Rudesheim  
Major General, USA  
Vice Director, Joint Staff
JOINT REPORTING STRUCTURE (JRS) LOGISTIC FACTORS REPORT (LOGFACREP)

References: Enclosure C

1. **Purpose.** This manual prescribes data reporting to support the Logistic Factors File (LFF). LOGFACREP is a part of the JRS as described in reference b and provides guidance from the Chairman of the Joint Chiefs of Staff (CJCS) on uniform reporting requirements for logistics planning factors under the JRS.

2. **Cancellation.** CJCSM 3150.23B, 1 October 2003, is hereby canceled.

3. **Applicability.** This manual applies to the Joint Staff, Combatant Commands, Military Services and Defense Agencies.

4. **Guidance.** The CJCS and the Joint Staff require timely and accurate submission of logistics planning information during contingencies or wartime. The JRS provides standardized procedures for reporting to the Joint Staff on selected areas of major concern. This manual incorporates detailed reporting requirements that support the development and maintenance of the logistics factors file (LFF). This change does not modify the LOGFACREP processes or change LFF data reporting. The LFF supports the creation of sustainment requirements leading to cargo increment numbers (CINs) that are used in Time-Phased and Force Deployment Data (TPFDD) files. Referenced sustainment data must be in a Joint Operation Plan and Execution System (JOPES) compatible format for insertion into TPFDDs supporting development of transportation planning, Logistics Supportability Analysis (LSA), and plan assessments. This change provides administrative update and verifies LOGFACREP data composition, reporting and does not change LFF data reporting.

5. **Responsibilities.** The Logistics Directorate, J-4, Joint Staff, is the office of primary responsibility for all matters relating to this program.
6. **Procedures.** See Enclosure A.

7. **Definitions.** Key terms, definitions, abbreviations and acronyms are provided in the Glossary.

8. **Releasability.** This manual is approved for public release; distribution is unlimited. DoD components (to include the Combatant Commands), other Federal Agencies, and the public may obtain copies of this manual through the Internet from the CJCS Directives Home Page at www.dtic.mil/cjcs_directives.

9. **Effective Date.** This MANUAL is effective on receipt.

ENCLOSURE A

LOGISTIC FACTORS REPORT

1. **Purpose**
   
a. The Logistic Factors Report (LOGFACREP) identifies the reporting mechanism and process to enter and update the LFF data, and is a JOPES standard reference file. This reference file is used as follows:
   
   (1) In conjunction with the Joint Strategic Planning System and the Joint Strategic Capabilities Plan (JSCP).

   (2) To develop, evaluate, and implement joint military operation plans (OPLANs) and operation orders (OPORDs).

   (3) To support adaptive planning, wargaming, assessments of future amphibious and civilian sealift footprinting, analysis of pre-positioning requirements, forward stocking, Logistics Supportability Analyses (LSAs), and analyses of future air and sealift asset acquisition.

   b. This report establishes the responsibilities of the Services, Combatant Commands, and Combat Support Agencies to provide consumption rates and resupply information to develop and maintain the LFF. Accurate logistic factors will assist the Combatant Commanders in projecting unit and nonunit-related cargo sustainment requirements and for conducting the LSAs and transportation feasibility analysis of a TPFDD in concert with the movement of force requirements.

2. **Submitted By.** The record transactions specified in this document will be submitted by reporting organizations, to provide data for unit type codes (UTCs) under their respective cognizance, origins for resupply, and personnel-base consumption rates to maintain the LFF (see Figure A-1).

<table>

</table>

Figure A-1. LOGFACREP Record Types

3. **Submitted To.** The prescribed reports will be submitted to the Joint Staff, Directorate for Operations, Deputy Directorate for Force Management and

4. **When Submitted.** LOGFACREPs will be submitted annually by 1 December, unless significant changes occur in the TUCHA UTC data or logistics consumption factors.

5. **How Submitted**

   a. **Classification.** The LOGFACREP will be classified by the originator in accordance with the highest classification of the record content.

   b. **Transmission.** LOGFACREP data will be transmitted as computer-readable ASCII text to the JSSC for update to the LFF database. Data can be transmitted via Web service or file transfer of the Defense Information Infrastructure Common Operating Environment.

   c. **Precedence.** During peacetime planning activities, transmission communications precedence for the LOGFACREP will be assigned as ROUTINE or PRIORITY based on the urgency of the request, requirement for the information, and response time indicated. During crisis situations, the LOGFACREP will be assigned a precedence of PRIORITY or IMMEDIATE, based on the urgency of the situation.

   d. **Minimize.** In support of peacetime planning activities, imposition of MINIMIZE for transmission communications will result in this report being submitted by mail or other alternative means of communication. In crisis situations, transmission of LOGFACREP during MINIMIZE is authorized, but should be based on the urgency of the transmission in conjunction with the operational situation.

6. **Reporting Procedures.** Data for this report are entered initially as “add transactions.” Subsequently, delete, add or change transaction processing update order will be “delete transactions,” “add transactions” and “change transactions.” The maintenance processor does not provide a method for deleting specific data fields using change logic. If a specific field is to be modified in a previously reported record, all record data including changes must be submitted as a change transaction. Input data are edited to conform to the reporting instructions and content in this document.

7. **Edit Check Reports.** JSSC will perform edit check analysis of transaction submissions and provide the following reports to the submitter when applicable:
a. **LFF Error Report.** Fields within the transaction that do not fulfill the edit criteria stated in this document are identified and an error report is produced.

b. **Data Input Report.** A report of input transactions to support file maintenance error analysis.

c. **Logical Audit Report.** An audit report to verify L2 records exist for each supply class/subclass reported in L1 and L3 records.

8. **Specific Reporting Instructions**

   a. **Record Types.** In addition to the standard JRS information, the LOGFACREP contains three detail record types (see Figure A-2). Records identify consumption rates and area adjustment multipliers for UTCs, origins and ports of embarkation (POEs) for resupply, and consumption rates based on individual personnel.

   b. **Report Rules.** For each UTC with associated consumable sustainment requirements, data transactions will be submitted via the following 3 record types, also described in Figure A-2. All 3 reports are a representation of five core logistics functions that are delivered to the Joint Warfighter and should support these logistics capability areas.

      (1) The LOGFACREP requires computations for sustainment requirements in the following core logistics functions: Supply, Logistics Services, Health Services, Operational Contract Support, and Engineering.

      (a) Supply operations include: identifying requirements; selecting supply sources; scheduling deliveries; receiving, verifying and transferring product; inspection and acceptance; managing inventory levels, capital assets, business rules, supplier networks, and agreements; plus authorizing supplier payments.

      (b) Logistics Services include the ability to provide services and functions essential to the technical management and support of the joint force. These functions include base operating support, food service/nutrition, water purification and ice, hygiene services, and mortuary affairs.

      (c) Health Services include the ability to synchronize, prioritize, direct, and support medical operations, including control of a total life cycle health system that employs an integrated and focused approach to protect and sustain the force by providing rapid Joint, interoperable, and scalable medical capabilities in all operational environments. The core capability areas are force health protection, health care delivery, and health service support.
(d) Operational Contract Support includes the ability to provide contract support integration and contractor management. Contract support integration is the coordination and synchronization of contracted support executed in a designated operational area in support of the joint force.

(e) Engineering includes the ability to integrate combat, general and geospatial engineering to meet national and Joint Force Commander requirements to ensure freedom of movement, provide infrastructure to position, project, and sustain the joint force, and enhance visualization of the operational area across the full spectrum of military operations.

(2) For each UTC Supply Class/Subclass combination, applicable L1 record transactions will be submitted. Data should be entered for every class/subclass of supply with sustainment and/or resupply requirements, which are projected based on applicable consumption rates for the reported UTC. L1 records identify consumption rates (including zero if that is a specified consumption rate) for every applicable UTC and for each class/subclass of resupply (see Table B-4), for the 5 intensity levels of force engagement (see Table B-3). Consumption data for supply class/subclass data not reported in an L1 record will be calculated based on unit personnel strength using the L3 record. This may cause erroneous consumption rates for classes or subclasses that would otherwise not be associated with a particular UTC.
(3) For origin geographic location code (GEOLOC) data reported, one L2 record must be included for each supply class/subclass in Table B-4 for each L1 and L3 record.

(4) One L3 record will be included for each supply class/subclass identified in Table B-4, with multiple records as necessary for fuel data.

c. Adding Records. Prior to establishing a record in the LFF, the JRS control, record identification, and data content must be correct. Following is a summary of JRS Header and End records:

<table>
<thead>
<tr>
<th>DATA FIELD</th>
<th>DATA ELEMENT NAME</th>

| END-9      | REPORT INDICATOR        | 2    | A/N       | 76-77           |
| END-10     | REPORT NUMBER           | 3    | N         | 78-80           |

d. Changing and Deleting Records. To process a change or delete transaction for records in the LFF, the record identification data elements must match the record in the file.
e. Data Element Rules. The following rules apply to data elements reported in LOGFACREP:

1. **Numeric (N).** Data elements with N-type data must contain a digit (0-9) in every character of the data field. Numbers must always be right-justified, with leading zeros. Leave data field blank when data are unavailable, unknown, or not applicable, except where noted.

2. **Alphabetic (A).** Data elements with A-type data must contain letters only. A-type data elements are always left-justified with trailing blanks.

3. **Alphanumeric (A/N).** Data elements with A/N-type data may contain letters, numbers, or special characters. A/N data are always entered left-justified with trailing blanks.

f. Reporting Detail Data Elements. Data originator is responsible for ensuring the reported detail data are correct in content and adhere to the format in this document.

g. Transaction Code. The transaction code identifies what action is required: A = add, C = change, or D = delete, in record position 5 of an input record. The order for processing transactions is delete, add, and change.

1. **Add Transaction.** This transaction adds data to the LFF and is used to create records. Duplicate L3 add transactions will function as a change transaction.

2. **Change Transaction.** Current file data are replaced with input record data. The record identification data elements are used to match the record data to the file data so the change may occur. To change data in the file, the change record must contain the appropriate record identification data elements and the current data for all fields to include data changes.

3. **Delete Transactions.** An L1 record delete is processed to remove obsolete UTCs that are no longer valid for reporting. An L2 record delete will not delete the record in that an origin is required for each supply class/subclass combination; however, any data for origin locations 2 and 3 will be removed. An L3 record delete is accomplished only for 3A and 3W records with a fuel type code. An L3 delete for other supply class/subclass records will result in zero quantitative rate values with multiplier values remaining unchanged. If there are future changes to the tables for supply class/subclass or fuel type codes to add or delete table values, special processing instructions will be issued.
9. **Report Content.** Data to be reported in the LOGFACREP are as follow:

<table>
<thead>
<tr>
<th>ELEMENT NAME</th>
<th>POSITION</th>
<th>REMARKS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sequence Number</td>
<td>1-3</td>
<td>The first detail record will be 002, and each record will be numbered successively up to 998</td>
</tr>
<tr>
<td>Security Classification</td>
<td>4</td>
<td>Enter one of the following codes to indicate the security classification of the record: U=UNCLASSIFIED, S=SECRET, C=CONFIDENTIAL</td>
</tr>
</tbody>
</table>

**EDIT:** Must be U, C, or S  
**ERROR:** INVALID SECURITY CLASSIFICATION/REJECT

Transaction Code | 5 | Enter one of the following codes to indicate the nature of the action when the record is processed into the file: A = ADD, C = CHANGE, D = DELETE |

**EDIT:** Must be A, C, or D  
**ERROR:** INVALID TRANSACTION/REJECT

Record Type | 6-8 | Enter one of the appropriate left-justified record type codes |

**EDIT:** Must be L1, L2, or L3  
**ERROR:** INVALID RECORD TYPE/REJECT

Detail Data | 9-nn | Detail data will be formatted for each record type as indicated below |

10. **Detail Record Data Elements.** Appendixes A through C contain the specific data to be reported on each detail record. A summary of the data in each record is indicated in Figure A-2. Each record consists of two parts. The first set of data elements identifies the record, and the second provides the quantitative data for the record. The data elements are identified in the order in which they must be submitted. The format for the data definitions of each record consists of: Data Field, Data Element Name, Size (number of characters), Type Data (A, N, A/N, etc.), and Record Position (character location within the record). **EDIT** criteria and **ERROR** complete the data element information. The layout and reporting requirements for the record types are defined in the Appendix A, “UTC Consumption Rates by Intensity Level with Area Adjustment Multipliers (L1 Record),” Appendix B, “Origins for Resupply and Ports of Embarkation (POEs) for Origin (L2 Record),” and Appendix C, “Personnel Based Consumption Rates (L3 Record).”
APPENDIX A TO ENCLOSURE A

UTC CONSUMPTION RATES WITH AREA ADJUSTMENT MULTIPLIERS (L1 RECORD)

The UTC Consumption Rates (L1 Record) specifies consumption rates for supply class/subclass by UTC. It consists of 3 data element groups: Record Identification, Intensity Level Rates, and Area Adjustment Multiplier.

1. Record Identification. This grouping of 4 reported data elements is used to identify the L1 record:

<table>
<thead>
<tr>
<th>DATA FIELD</th>
<th>DATA ELEMENT NAME</th>
<th>SIZE</th>
<th>TYPE DATA</th>
<th>RECORD POSITION</th>
</tr>
</thead>
<tbody>
<tr>
<td>L1-1</td>
<td>SERVICE</td>
<td>1</td>
<td>A</td>
<td>9</td>
</tr>
</tbody>
</table>

   Definition: Identifies the organization reporting the data. Note: Enter code from Table B-1. This is a record control field and cannot be changed.

   EDIT: Required. Code must be one listed in Table B-1.

   ERROR: INVALID CODE/REJECT or ENTRY REQUIRED/REJECT.

| L1-2       | UNIT TYPE CODE (UTC) | 5    | A/N       | 10-14           |

   Definition: Identifies the UTC in the organization reporting the data. Enter valid UTC (UTC in TUCHA file). Reference Table B-6, UTC, for additional information. This is a record control field and cannot be changed.

   EDIT: Required. Must be a valid UTC in TUCHA file.

   ERROR: UTC NOT REPORTED IN TUCHA/WARNING.
### DATA FIELD ELEMENT NAME | SIZE | TYPE | RECORD POSITION
--- | --- | --- | ---
L1-3 | SUPPLY CLASS/SUBCLASS | 2 | A/N | 15-16

**Definition:** Identifies the class/subclass of non-unit cargo supply. Applicable code as shown in Table B-4. This is a record control field and cannot be changed.

**EDIT:** Required entry in accordance with Table B-4.

**ERROR:** INVALID CODE/REJECT or ENTRY REQUIRED/REJECT.

L1-4 | FUEL TYPE | 3 | A/N | 17-19

**Definition:** Identifies the fuel type nomenclature. For allowed values see Table B-2. Leave blank if L1-3 above is not 3A or 3W. This is a record control field and cannot be changed.

**EDIT:** Entry required from Table B-2 if L1-3 is 3A or 3W; otherwise, leave blank.

**ERROR:** ILLOGICAL L1-3 AND L1-4 RELATIONSHIP/REJECT.

### 2. Intensity Level Rates
These data elements report **baseline** consumption rates per supply class/subclass based upon a MCO-PAC area of operations (AO). **These rates are adapted for MCO-CENT, lesser contingency (LC), and Stability, Security, Transition, and Reconstruction (SSTR) areas in the following paragraph, Area Adjustment Multiplier.** Consumption rates for 1W, 3A, and 3W will be gallons per UTC per day; all other class/subclass rates will be pounds per UTC day. For classes or subclasses of supply that are not consumed by the cognizant UTC, enter zeros in data fields L1-5 through L1-9.

### DATA FIELD ELEMENT NAME | SIZE | TYPE | RECORD POSITION
--- | --- | --- | ---
L1-5 | HEAVY RATE | 10 | N | 20-29

**Definition:** Consumption rate for class/subclasses of supply being defined for a heavy combat condition. Reference Table B-3 for definition of intensity rates. This rate is a 10-position figure expressed to 2 decimal places. \((1234567890 = 12345678.90)\)

**EDIT:** Numeric and right-justified.

**ERROR:** MUST BE NUMERIC.
<table>
<thead>
<tr>
<th>DATA FIELD</th>
<th>DATA ELEMENT NAME</th>
<th>SIZE</th>
<th>TYPE</th>
<th>RECORD</th>
</tr>
</thead>
<tbody>
<tr>
<td>L1-6</td>
<td>MODERATE RATE</td>
<td>10</td>
<td>N</td>
<td>30-39</td>
</tr>
</tbody>
</table>

Definition: Consumption rate for class/subclass of supply defined for a moderate combat condition. See Table B-3 for definition of intensity rates. If only one rate is provided, use this field to express an AVERAGE COMBAT INTENSITY. This rate is a 10-position figure expressed to 2 decimal places. (1234567890 = 12345678.90)

EDIT: Numeric and right-justified.
ERROR: MUST BE NUMERIC.

<table>
<thead>
<tr>
<th>DATA FIELD</th>
<th>DATA ELEMENT NAME</th>
<th>SIZE</th>
<th>TYPE</th>
<th>RECORD</th>
</tr>
</thead>
<tbody>
<tr>
<td>L1-7</td>
<td>LIGHT RATE</td>
<td>10</td>
<td>N</td>
<td>40-49</td>
</tr>
</tbody>
</table>

Definition: Consumption rate for class/subclass of supply defined for a light-combat operation. Intensity rates are defined in Table B-3. Rate is a 10-position figure to 2 decimal places (1234567890 = 12345678.90).

EDIT: Numeric and right-justified.
ERROR: MUST BE NUMERIC.

<table>
<thead>
<tr>
<th>DATA FIELD</th>
<th>DATA ELEMENT NAME</th>
<th>SIZE</th>
<th>TYPE</th>
<th>RECORD</th>
</tr>
</thead>
<tbody>
<tr>
<td>L1-8</td>
<td>RESERVE RATE</td>
<td>10</td>
<td>N</td>
<td>50-59</td>
</tr>
</tbody>
</table>

Definition: Consumption rate for class/subclass of supply defined for a Reserve force. Intensity rates are defined in Table B-3. Rate is a 10-position figure to 2 decimal places (1234567890 = 12345678.90).

EDIT: Numeric and right-justified.
ERROR: MUST BE NUMERIC.

<table>
<thead>
<tr>
<th>DATA FIELD</th>
<th>DATA ELEMENT NAME</th>
<th>SIZE</th>
<th>TYPE</th>
<th>RECORD</th>
</tr>
</thead>
<tbody>
<tr>
<td>L1-9</td>
<td>NONCOMMITTED RATE</td>
<td>10</td>
<td>N</td>
<td>60-69</td>
</tr>
</tbody>
</table>

Definition: Consumption rate for class/subclass of supply defined for forces not committed. Intensity rates are defined in Table B-3. Rate is a 10-position figure to 2 decimal places (1234567890 = 12345678.90).

EDIT: Numeric and right-justified.
ERROR: MUST BE NUMERIC.
3. **Area Adjustment Multiplier.** These data elements are used as a factor to adjust intensity level rates based upon the MCO-PAC AO for the MCO-CENT, LC, and SSTR. The rate is a factor (multiplier) with 2 decimal positions (56.89) and is expressed in the report as 5689. If the consumption rate for a class/subclass for the MCO-PAC AO is defined as 94.08 pounds for heavy combat conditions and the factor for LC is 05.03, the heavy combat rate for LC would be 473.22 pounds for heavy consumption rate for LC AO. **A value of 0100 maintains the baseline rate as for MCO-PAC (Multiplier is “1”, as 01.00).**

<table>

APPENDIX B TO ENCLOSURE A

ORIGINS FOR RESUPPLY AND PORTS OF EMBARKATION FOR ORIGINS (L2 RECORD)

The Origins for Resupply (L2 Record) allows the Service to report the percentage of cargo for up to three origins of resupply for each supply class/subclass, 2 airports and seaports of embarkation, and for each AO. The Defense Logistics Agency (DLA) Energy as the Executive Agent for Class III (B) will submit the resupply sources and ports of embarkation for Class III (B). DLA Energy will provide the Services resupply and ports of embarkation data upon request or no later than 30 days prior to the annual submission date in accordance with A-B-1(2). It consists of two major data element groups: Record Identification and Origins and POEs Data, with Resupply Percentages for Operational Areas.

1. Record Identification. The elements called SERVICE, SUPPLY CLASS/SUBCLASS, and record type are used as the record controls. The reporting organization is allowed to report the percentage of cargo for up to three origins of resupply for each supply class/subclass for each AO.

Definition: Identifies the Military Service reporting the data. Enter one letter Service code from Table B-1. This is a record control field and cannot be changed.

EDIT: Required. Code must be one listed in Table B-1.
ERROR: INVALID CODE/REJECT or ENTRY REQUIRED/REJECT.

L2-2 SUPPLY CLASS/SUBCLASS 2 A/N 10-11

Definition: Identifies the non-unit cargo class/subclass of supply. Enter applicable code from Table B-4. This is a record control field and cannot be changed. An L2 record is required for each supply class/subclass in Table B-4 to support L1 and L3 records.

EDIT: Required. Must be in accordance with Table B-4.
ERROR: INVALID CODE/REJECT or ENTRY REQUIRED/REJECT.
2. **Origins and POEs, with Resupply Percentages for Operational Areas**

   a. This data reports the percent of a supply class/subclass designated from an origin GEOLOC to an operational area (MCO-PAC, MCO-CENT, ALL AREAS (i.e., LC)).

   b. One to three GEOLOCs (fields L2-3, L2-11, and L2-19) may be specified per supply class/subclass and Service.

   c. Percentages must be 000 or between 010 and 100 percent. (Include origins with small rates (less than 10 percent) with one of the other reported areas.)

   d. Each GEOLOC must have a numeric entry in one or more of the associated rate fields.

   e. Both fields (RATE FOR MCO-PAC AREA and RATE FOR MCO-CENT AREA) for specified GEOLOC must be blank if an entry occurs in the RATE FOR ALL AREAS field.

   f. Both fields (RATE FOR MCO-PAC AREA and RATE FOR MCO-CENT AREA) for a specified GEOLOC must have a numeric entry of 000 or 010 through 100 if the RATE FOR ALL AREAS field is blank.

   g. The cumulative total of the fields RATE FOR MCO-PAC AREA (L2-4 + L2-12 + L2-20) must be blank or total to 100 percent.

   h. The cumulative total of the fields RATE FOR MCO-CENT AREA (L2-5 + L2-13 + L2-21) must be blank or total to 100 percent.

   i. The cumulative total of the fields RATE FOR ALL AREAS (L2-6 + L2-14 + L2-22) must be blank or total to 100 percent.

   j. If an error occurs in any field of the record, the whole record is rejected.

   k. The change transaction may remove the GEOLOC and its associated rates for the second and third GEOLOCs of the record.

   l. The first GEOLOC may not be removed, but may be changed.

   m. Each record must contain a GEOLOC in the first GEOLOC position and must have associated percentage rates.

APPENDIX C TO ENCLOSURE A

PERSONNEL BASED CONSUMPTION RATES (L3 RECORD)

The Personnel Based Consumption Rate (L3 Record) allows reporting organizations to report consumption rates based on pounds per person per day or gallons per person per day for each of 5 intensity levels for all forces, with a distinction for Navy between forces ashore and afloat, with area adjustment multipliers.

1. The L3 record will have a transaction for each supply class/subclass listed in Table B-4, except for 3A and 3W. Supply class/subclasses 3A and 3W may have one or more transactions as determined by fuel type codes reported from Table B-2.

2. The STON [short ton] TO MTON [measurement ton] MULTIPLIER for add or change transactions is not applicable to supply class/subclass 1W, 3A, or 3W, and may be reported as spaces or zeros. For other supply class/subclass values the STON TO MTON MULTIPLIER is reportable.

3. If data are reported in the intensity level consumption rate fields (L3-4 through L3-13) and spaces or zeros are reported in the multiplier (L3-14 MCO-CENT, L3-15 LC, or L3-16 SSTR) the processor will automatically enter a 00100 for the multiplier to be a value of 1.0. A duplicate add transaction will be processed as a change transaction.

4. In the update process, since a record is required for each supply class/subclass other than 3A and 3W, a delete transaction will leave the L3 record in the database, enter zeros in the rate fields, and enter 010 for STON TO MTON MULTIPLIER (except for supply class/subclass 1W).

5. Delete transactions for records with supply class/subclass of 3A or 3W with fuel codes will be processed to delete the data from the database.

   a. **Record Identification Data Element Group.** This grouping of 3 reported data elements is used as the record identifier.
### DATA FIELD | DATA ELEMENT NAME | SIZE | TYPE | RECORD POSITION
--- | --- | --- | --- | ---
L3-1 | SERVICE | 1 | A | 9
L3-2 | SUPPLY CLASS/SUBCLASS | 2 | A/N | 10-11
L3-3 | FUEL TYPE CODE | 3 | A/N | 12-14

**Definition:** Identifies the organization reporting the data. Enter Service code from Table B-1. This is a record control field and cannot be changed.

**EDIT:** Required. Code must be one listed in Table B-1.

**ERROR:** INVALID CODE/REJECT or ENTRY REQUIRED/REJECT.

**Definition:** Identifies the class/subclass of non-unit cargo supply. Enter applicable code shown in Table B-4. An entry in this field is required for each class/subclass of supply shown in Table B-4. This is a record control field and cannot be changed.

**EDIT:** Required entry. Must be a value in Table B-4.

**ERROR:** INVALID CODE/REJECT.

**Definition:** Identifies the fuel type nomenclature. This field is used to report POL subclasses 3A and 3W using applicable product codes from Table B-2. Leave blank if L3-2 contains an entry from Table B-4 other than 3A or 3W. This is a record control field and cannot be changed.

**EDIT:** Entry required for fuel classes 3A and 3W; otherwise, leave blank. If used, must be from Table B-2.

**ERROR:** INVALID CODE/REJECT or ENTRY REQUIRED FOR SUPPLY CLASS/SUBCLASS 3A OR 3W.

b. **Intensity Level Consumption Rate.** This grouping of data elements is used to report consumption rates per class/subclass of supply based upon an MCO-PAC AO. Rates for consumption for 1W (drinking water) and for 3A and 3W (fuel class) will be gallons per person per day. All other class/subclass consumption rates will be expressed as pounds per person per day. For Navy input, only RATE AFLOAT fields require entry. Blanks in other rate fields will produce zeros in the database and on the report.
**DATA FIELD** | **DATA ELEMENT NAME** | **SIZE** | **TYPE** | **RECORD**
---|---|---|---|---
L3-4 | HEAVY CONSUMPTION RATE | 5 | N | 15-19

Definition: Rate of supply for a heavy combat condition. Table B-3 defines intensity rates. Enter zeros if not applicable. Blanks will produce zeros in the database and in the report. For Navy input, this field should be used to denote a rate for forces ashore. Rate is a 5-position figure expressed to 2 decimal places (12345 = 123.45).

EDIT: Must be numeric. Right-justified.

ERROR: NOT NUMERIC.

---

L3-5 | HEAVY CONSUMPTION RATE | 5 | N | 20-24

Definition: Rate is for a heavy combat condition for naval forces afloat. Table B-3 defines intensity rates. Enter zeros if not applicable. Leave blank if Service code in L4-1 is not equal to “N.” Rate is a 5-position figure expressed to 2 decimal places (12345 = 123.45).

EDIT: Must be numeric if Service code is equal to “N.” If Service code is not equal to “N,” must be blank.

ERROR: SERVICE CODE EQUAL TO “N” AND NOT NUMERIC or SERVICE CODE NOT EQUAL TO “N” AND NOT BLANK.

---

L3-6 | MODERATE CONSUMPTION RATE | 5 | N | 25-29

Definition: Rate of supply for a moderate combat condition. Table B-3 defines intensity rates. If only one rate is provided, use this field to express an AVERAGE COMBAT INTENSITY. Enter zeros if not applicable. For Navy input, this field should be used to denote a rate for forces ashore. Rate is a 5-position figure expressed to 2 decimal places (12345 = 123.45).

EDIT: Must be numeric. Right-justified.

ERROR: NOT NUMERIC.

Definition: Rate is for Reserve force afloat. Table B-3 defines intensity rates. Enter zeros if not applicable. Leave blank if Service code in L3-1 is not equal to “N.” Rate is a 5-position figure expressed to 2 decimal places (12345 = 123.45).

EDIT: Must be numeric if Service code is equal to “N.” If Service code is not equal to “N,” must be blank.

ERROR: SERVICE CODE EQUAL TO “N” AND NOT NUMERIC or SERVICE CODE NOT EQUAL TO “N” AND NOT BLANK.

Definition: Rate of supply for force not committed. Table B-3 defines intensity rates. Enter zeros if not applicable. For Navy input, this field should be used to denote a rate for forces ashore. Rate is a 5-position figure expressed to 2 decimal places (12345 = 123.45).

EDIT: Must be numeric. Right-justified.

ERROR: NOT NUMERIC.
c. **Area Adjustment Multiplier.** This group of data elements is used as a factor to adjust intensity level rates based upon the MCO-PAC AO for the MCO-CENT, LC, and SSTR operations. The rate is defined as a factor (multiplier) with two decimal positions (056.80) and is expressed in the report as 05680. If the consumption rate for a class/subclass for the MCO-PAC AO is defined as 094.00 pounds for heavy combat conditions and the factor for LC is 005.30, the heavy combat rate for LC would be 498.20 pounds for heavy consumption rate for the LC AO.

Definition: Identifies the number used as a multiplier to adjust each intensity level consumption rate (L3-4 to L3-13) for an MCO-CENT AO. This position figure is expressed to 2 decimal places (12345 = 123.45). If there is no change in the rate enter 00100, which indicate the intensity level rate multiplied by 1.

EDIT: Must be numeric. Right-justified.

ERROR: MUST BE NUMERIC.
### L3-15 Multiplier for LC

**Definition:** Identifies the figure used as a multiplier to adjust each intensity level consumption rate (L3-4 to L3-13) for an LC AO. This is a 5-position figure expressed to 2 decimal places (12345 = 123.45). If there is no change in the rate enter 00100, which indicates the intensity level rate multiplied by 1.

**EDIT:** Must be numeric. Right-justified.

**ERROR:** MUST BE NUMERIC.

### L3-16 Multiplier for SSTR

**Definition:** Identifies the number used as a multiplier to adjust each intensity level consumption rate (L3-4 to L3-13) for an SSTR AO. This is a 5-position figure expressed to 2 decimal places (12345 = 123.45). If there is no change in the rate enter 00100, which indicates the intensity level rate multiplied by 1.

**EDIT:** Must be numeric. Right-justified.

**ERROR:** MUST BE NUMERIC.

### L3-17 STON to MTON Multiplier

**Definition:** Identifies the figure used as a multiplier to convert short tons to measurement tons. Leave blank if supply class/subclass is equal to 1W, 3A, or 3W. This is a 3-position figure expressed to 1 decimal place (123 = 12.3). Default value is 010.

**EDIT:** Must be numeric, right-justified, and greater than zero unless supply class/subclass is 1W, 3A, or 3W, in which case it must be blank.

**ERROR:** MUST BE NUMERIC-GREATER THAN ZERO, OR MUST BE BLANK, OR ILLOGICAL RELATIONSHIP BETWEEN SUPPLY CLASS/SUBCLASS.
ENCLOSURE B

REFERENCE TABLES AND CODES

Table B-1. Organization Codes

2. Fuel Type Codes. Fuel type codes management is guided by policies and procedures promulgated by DLA Energy in accordance with references g and h. Reference i is a comprehensive list of fuel data with Defense Fuel Automated Management System Product Codes which relate to fuel type codes reported in the LOGFACREP. Following are the primary fuel types subject to entry of logistic factors. Many specific fuel types are various versions of fuel that DLA Energy would supply to fill the requirement. Various specific types of fuel are used by DLA Energy because of unique situations encountered when sourcing fuel for users, including weather (especially cold and arctic weather conditions) and regional politics (e.g., taxed and non-taxed fuel types, as sometimes the tax status dictates the dying of fuel).

</table>
LEVEL OF OPERATION | DEFINITION
--- | ---
Force Not Operationally Employed (Noncommitted) | A force that has been withdrawn or is not ready for combat for reasons such as damage, losses, or retraining requirements. May not be up to strength in equipment and/or personnel. Also, includes forces deployed to intermediate bases and nodes supporting the theater of operations outside the combat zone.

Table B-3. Force-Engagement Intensity Level Definitions

4. DOD Supply Class Codes. These codes define classes and subclasses of supply using the numeric supply class codes and related alphabetic supply subclass codes.

<table>
<thead>
<tr>
<th>SUPPLY CLASS</th>
<th>SUBCLASS</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>1- Subsistence:</strong> Food</td>
<td>A - Nonperishable dehydrated subsistence that requires organized dining facilities. C - Combat Rations includes meals, ready to eat (MRE) that require no organized dining facility; used in combat and in-flight environments. Includes gratuitous health and welfare items. R - Refrigerated subsistence. S - Non-refrigerated subsistence (less other subclasses). W – Water</td>
</tr>
<tr>
<td><strong>2 - General Support Items:</strong> Clothing, individual equipment, tentage, organizational tool sets and tool kits, hand tools, material, administrative, and housekeeping supplies.</td>
<td>A - Air B - Ground support material E - General supplies F - Clothing and textiles G - Electronics M - Weapons T - Industrial supplies (e.g., bearings, block and tackle, cable, chain, wire, rope, screws, bolts, studs, steel rods, plates, and bars)</td>
</tr>
<tr>

| **3 - POL**: Petroleum (including packaged items), fuels, lubricants, hydraulic and insulating oils, preservatives, liquids and compressed gasses, coolants, de-icing, and anti-freeze compounds, plus components and additives of such products, including coal. | A - Air  
W - Ground (surface)  
P - Packaged POL |
| **4 - Construction**: Construction materials and barrier materials. | A - Construction  
B - Barrier materials |
| **5 - Ammunition**: Ammunition of all types (including chemical, radiological, and special weapons), bombs, explosives, mines, fuses, detonators, pyrotechnics, missiles, rockets, propellants, and other associated items. | A - Air  
W - Ground |
| **6 - Personal Demand Items**: Non-military sales items. | A - Personal demand items not packaged as Ration Supplement Sundry Packs (RSSP).  
M - Personal and official letter and packaged mail. Does not include items in other classes such as spare parts.  
P - RSSP |
### SUPPLY CLASS

10 - (code as zero ‘0’) Material to support military programs, not included in classes 1 through 9. | None

Table B-4. DOD Supply Class Codes

5. **Geolocation Codes.** (See Table B-5 below)

   a. **Purpose.** Codes for all locations (i.e., origins, POEs, ports of debarkation, intermediate locations, or destinations) should be selected from the standard specified GEOFILE, managed by the Operations Directorate, J-3, Joint Staff. Locations are identified by a 4-character GEOLOC. Locations reported for the LFF must be registered in the GEOFILE.

   b. **Composition.** The GEOFILE is an automated table of worldwide geographic locations, including water areas. Data fields include GEOLOC, location name, installation type code (e.g., IAP -International Airport), state or country code, state or country name, and latitude and longitude point coordinates. The file may be used as an augmentation table, validity check, or extraction reference file for any applications requiring geographic locations.

   c. **Ocean-Area Boundaries.** The boundaries for a given ocean-area GEOLOC may be found in reference a.

   d. **Unknown Location.** The GEOFILE also includes a code for an unknown location in each country and a code for an unknown foreign location (to be used when country is not to be known).

</tr>
</tbody>
</table>

Table B-5. Geolocation Codes

e. **Multiple GEOLOCs.** There may be more than one GEOLOC for the same location name. The difference is apparent in the type of installation code. Care must be exercised to ensure that the correct GEOLOC is chosen and reported, depending upon the precise location it is intended to indicate. For example:
ADVK might be used when Albany (city) is to be reported as an origin, whereas ADVT is the proper GEOLOC to indicate Albany (port) as a POE.

6. **Unit Type Codes**

   a. **Purpose.** The UTC is the primary means of identifying standard types of forces and describing force requirements.

   b. **General.** The UTC is a 5-character, upper case, alphanumeric code that is associated with and allows each type unit or organization to be categorized into a class having common distinguishing characteristics. The first character (functional category code) indicates the primary function of the type unit. For more detail concerning the UTC and the TUCHA file, see reference c.

   c. **UTC Categories.** A UTC may be categorized as standard or nonstandard (complete or incomplete) in relation to associated data elements within the TUCHA file. Only the terms “standard” and “nonstandard” should be used; however, the terms “complete” and “incomplete” have been used in the past. To be reported in the LFF, a UTC must be standard or complete in the TUCHA file. Figure B-6 lists definitions of these categories.

<table>
<thead>
<tr>
<th><strong>UTC CATEGORY</strong></th>
<th><strong>DEFINITION</strong></th>
</tr>
</thead>
<tbody>
<tr>
<td>Standard</td>
<td>A UTC in the TUCHA file that has complete movement characteristics. Such a UTC would describe a deployable type unit of fixed composition.</td>
</tr>
<tr>
<td>Nonstandard</td>
<td>Describes a type unit that: (1) Is in TUCHA and has no fixed composition (variable); (2) Is not in TUCHA; or (3) Has incomplete data in TUCHA or no associated movement characteristics in the TUCHA file (identified by the proper functional category code followed by ‘99BB’, or in accordance with AFI 10-401, “USAF Operation Planning Process”, and the “USAF War and Mobilization Plan”).</td>
</tr>
<tr>
<td>Complete</td>
<td>Same as a standard UTC.</td>
</tr>
<tr>
<td>Incomplete</td>
<td>A UTC in the TUCHA file that should, but does not have complete movement characteristics reported. This type unit is considered to be nonstandard.</td>
</tr>
</tbody>
</table>

PART II - DEFINITIONS

Services. Refers collectively to the Army, Navy, Air Force, Marine Corps, and Coast Guard.

Lesser Contingency (LC). The DOD Dictionary of Military Terms defines contingency as an emergency involving military forces caused by natural disasters, terrorists, subversives, or by required military operations.

Major Combat Operations (MCO). Large-scale operations conducted against a nation state(s) that possesses significant regional military capability, with global reach in selected capabilities, and the will to employ that capability in opposition to or in a manner threatening to US National Security.

Stability, Security, Transition and Reconstruction (SSTR). Department of Defense activities that support USG plans for stabilization, security, reconstruction and transition operations, which lead to sustainable peace while advancing US interests.
